; Subtitles: English; Genre: drama, romance ; Status: Status: Uploaded On : Aug 26, 2012 Movie Length: 50 min ; Uploader: deo_222 ; Release Date: 2011 (First released: August 26, 2012) ; Release Group: Kolkata North Bengal Region ; Country: India

As we had been told, we entered the next morning with some fifty seconds to spare, and found ourselves in a very unappealing dive, with a small outside terrace, looking at the buildings of Torsha. A brief explanation as to why the name of this island was changed from Porhoo to Torsha, is that the former name Porhoo is the name of a small fishing village, while Torsha comes from the Tangail-Bogra Railway Station.

How the Human T Cell Receptor Evokes Signal Transduction. T cells express an antigen receptor that consists of both an antigen-recognition domain and a signaling domain. The T cell receptor (TCR) is a membrane protein and forms a complex with a coreceptor (CD3) and other proteins, which together results in initiation of intracellular signaling upon interaction with an antigen. The coreceptors and the accessory proteins that associate with the TCR, and the pathways that are triggered by TCR stimulation have been studied for several decades. In this review, we summarize the current understanding of the cellular pathways that are initiated by TCR ligation.

The presence of clusterin in spermatozoa: a review of the literature. The appearance of clusterin in spermatozoa is controversial. There are two main approaches used to study this protein: one is to measure its concentration in the seminal plasma, and the other is to look at the presence of spermatozoa in the testis and ejaculate. There is evidence in the literature of clusterin present in the semen, but in a very low concentration, and it has been related with the presence of testicular diseases. However, this review points to the fact that most of the work has been done using the former approach. We have tried to ascertain, using a Medline search and using different keywords, the information that is available in the literature regarding the presence of clusterin in the semen and the appearance of the protein in the epididymis. There is some evidence of the presence of clusterin in the ejaculate; however, most of the work done has been focused on the seminal plasma. There is very
